

About TDNet

TDNet is a unique leading electronic journals management system produced by TDNet Ltd, a subsidiary of Teldan Information Systems.

TDNet was primarily designed as an Intranet system to serve information customers within organizations, but can also be accessed and searched on remotely.

TDNet is free to all users within purchasing organizations. Table Of Contents (TOC) access and usage is strictly forbidden to any use originated from or targeted to audiences out of purchasing organizations.

How to use TDNet

TDNet comprises of two inter linked files:

TDNet main site where you can browse a list of e-journal titles which were chosen by your organization to be included in the TDNet service.

Each record on TDNet main site includes the following information:

Journal Title (linked to the journal site).

Vendor Access (linked to journals at aggregators sites) (where applicable).

Publisher (linked to the publisher's site).

Back issues archive (linked to the journal's archives of back issues, full-text or table-of-contents as provided by the publishers) (where available).

Access permissions, reflecting full-text access permissions currently held by your organization.

Print holdings, indicating whether or not the print version of the journal is shelved at your organization, and linked to the print web or Z39.50 compatible catalog.

Local View (linked to locally stored table of contents).

TDNet main site is searchable. You may search the site by journal titles, publishers or ISSN (e-version).

TDNet TOC (Table Of Contents), stores accumulated electronic table of contents records (usually one rolling year accumulations) for journal titles included in the TDNet service. The TOC file is updated weekly and all bibliographic information is searchable.

Each TDNet TOC record includes the following information:

- Article title
- Author(s) of the article
- Article source (Journal title, linked to the journal site)
- ISSN (print and electronic versions)
- Date, Volume & issue numbers
- Pages

- Publisher (linked to the publisher's site)
- Language (of original article)
- British Library Shelf mark (designates the id number of the article for British Library orders)
- Print holdings (indicating whether or not the print version of the journal is shelved at your organization)
- Full text access status (for your organization)
- Archive (linked to publisher's back files)

Searching TDNet

You may choose to search TDNet field by field, or click the "Combined Search" button for combined searches.

For searching TDNet **Main Site** click the "Search Site" button. You may choose to search the site by:

- Subject
- Journal Title
- Publisher
- Aggregator/Vendor
- ISSN

For searching TDNet **Table Of Contents** click the "Search TOC" button. Here you may choose to search by:

- Subject
- Article Title
- Author(s)
- Journal Title
- Volume & issue numerations
- Publisher
- Aggregator/Vendor
- Year of Publication
- ISSN

For better and more accurate results you can narrow your searches as you go.

My TDNet

My TDNet is TDNet's personal profiling area. My TDNet is free and open to all users within authorized organizations.

Among My TDNet most important features:

- Personal profile building - where users may define their own collection for viewing and searching.
- Current awareness - where users are welcome to choose journal titles or keywords for alerting purposes. Once this feature is ordered, users will receive weekly updates of linked contents, as they become available.

MY TDNet may also be used by administrators to build group profiles, such as course, departmental or faculty profiles and alerts.

Document Delivery

The TDNet document delivery feature is optional. Administrators who choose to add a document delivery option, choose preferred document suppliers, to which they prefer their users to send orders. Such suppliers could be the organization's library, a commercial supplier or any other supplier of choice. Once this option is installed, authorized users may easily email retrieved bibliographic records for document requests.

Administrative Tools

TDNet offers valuable management tools to enable better control and more effective usage of the electronic journals collection. Entering the system with their special administrator password, customers may:

- **Activate TDNet Statistics Reports Generator**, for extensive usage data of their electronic journals collection. The TDNet statistics Report includes usage information on journals, publishers, aggregators, individual users, peak times, profiles, alert requests, document delivery requests and more.
- **Browse the vast TDNet e-journals database**, and locate new journals, find out about online access requirements, add free titles to their files, etc.
- **Update the TDNet file** - i.e. change holdings information, add or remove titles, change vendor information, etc.

Operating TDNet

Please note that TDNet is a modular service and as such, organizations may choose not to purchase all service modules. In case you encounter problems in operating some of the features described above, please check with your library or system administrator for your current usage rights.

Search Help

Partial Words provides the broadest search, finding every instance of your search terms. For example, if you search for "biolog" you will get titles that include "biology, biological, neurobiology, etc.

Begins With provides a broad search, finding instances of your search terms in the beginning of the article or journal title. For example, if you search for "botanica" you will get the journal titles "Botanica Marina" and "Botanical Journal of Scotland" and not "Acta Botanica Brasilia".

Exact Words allows you to be more precise by finding journals that include the complete word you entered into the search box. For example, if you search for "chemistry" you will find all titles with chemistry in the title, but it will exclude titles like "neurochemistry" from the journal search results.

Exact String allows you to find a sequence of exact words. For example, if you search for "Annual Review of" you will find titles like "Annual Review of Chemistry," or "Annual Review of Biochemistry" but titles like "Review of Annual Statistics" will not appear because the words did not appear in the correct sequence.

Exact Phrase searching is the most specific search option, allowing you to search for the exact journal name, which is especially useful for finding one-word journal titles. For example, if you search for "Nation" it will only display journals called "Nation". Additional title info within brackets will also be displayed. For example, "Nation , The (US)". For example."

We hope you enjoy using TDNet!
